PJUUR®

imagine invisible

- Imagine Invisible -

PJUUR® offers a completely new range of high quality 'invisible solutions' for practical components and facilities that are necessities. Our product range is inspired by 'the essences', which are lightness, unity, purity in detail and its materials.

PJUUR®

imagine invisible

PRODUCT RANGE

EVEN	Recessed frames for power outlets, wall switches, domotics, ...
SMOOTH	Recessed frames and covers for power outlets.
PHANTOM	Recessed Wall frames for BACHMANN® Twist.
WAY OUT	Recessed frames and kits for lighting canopies and suspension points.
A/B/D/S	Recessed frames and spot lighting.
AERO S	Recessed round and square frames and air vents.
AERO M	Recessed round frames and air vents for mid-range flow.

Our solutions reduce the presence of architectural, yet valuable, functions by harmonizing them in its surrounding environment. They combine convenience with (visual) comfort. PJUUR® aims to achieve essential quality and balance.

Unique in its kind, PJUUR® provides 2 installation options for each function to facilitate the seamless integration for both drywall-system and plastering brick or concrete:

HW	Trimless frames for drywall-systems, installed according to drywall-panels of 12,5mm thickness.
ST	Trimless frames for brickwork or concrete, which only need a finishing layer of 4-6mm plasterwork.

MATERIALS

Within the technical development of the product range all aspects were considered to provide a step-by-step and easy-to-install nearly invisible solution. PJUUR® developed its own material composition mainly consisting of natural gypsum ($CaSO_4 \cdot 2H_2O$ / calcium sulfate dihydrate) and other all-natural additives.

This results in easy to finish, high strength, heat and fire-resistant products. Because the applied material has the exact same density and thermal behaviour as drywall and/or plasterwork, a polished and smooth result without cracks can be assured.

REDUCE - REUSE - RECYCLE

PJUUR® strives for an optimal balance between new and recycled resources. During the manufacturing process we consider the consequence of each part, material, process, and way of handling on the environment. Our process is continuously monitored, evaluated and optimized during the chain of development and production. We have a network of local suppliers and aim to produce locally whenever possible (considering technical and economic feasibility).

Only in cases in which even the most inventive solutions cannot create the optimal situation, PJUUR® has decided to use only prime materials which can be split-up and recycled easily.

To truly fulfil our commitment to protecting the planet and its resources for future generations, PJUUR® commits and donates at least 1% of its annual net revenues to a local environmental organization.
